Powder Technology, *57* (1989) 297 - 299

Subject Index

Admixing of lubricants
  influence on compressibility and compactability of uranium dioxide powders, 135
Agglomeration
  computer simulation of, by a two-dimensional random addition model, 157
Agglomeration kinetics
  and micromeritic properties of agglomerate accompanied by compaction process, 157
Aluminium oxide
  and ammonium hexafluoro-aluminate, conversion into powder in the thermal decomposition of a complex solid containing, 151
Ammonium hexafluoro-aluminate
  and aluminium oxide, conversion into powder in the thermal decomposition of a complex solid containing, 151
Application of Weibull theory
  to primary fragmentation of a coal during devolatilization, 197
Attrition
  stochastic analysis of - a general cell model, 1
Automatic image analysis
  Miles method for determination of particle size distribution by, 165
Average circulatory motion
  of particles in fluidized beds, 107
Axisymmetric flow
  around individual spheroidal particles, drag coefficient for, 193

Barium titanate
  fine powders formed from hydrothermal crystallization, characterization of, 181
Bed expansion
  settling velocity and wall effects of solid particles in viscous non-Newtonian solutions in solid–liquid fluidized beds, 39
Beds
  shallow vibrated, identifying states in, 267
Behaviour of cohesive powders
  in narrow-diameter fluidized beds, 127
  of solid particles in viscous non-Newtonian solutions: settling velocity, wall effects and bed expansion in solid–liquid fluidized beds, 39

Characterization of barium titanate fine powders formed from hydrothermal crystallization, 181
Circulatory motion
  average, of particles in fluidized beds, 107
Coal
  cohesive, vertical plug flow of, in 2- and 4-inch pipes, 59
  preparation of mixtures with water; effect of the type of coal and improvement of quality of a suspension by means of particle properties, 223
  primary fragmentation of, during devolatilization, application of Weibull theory to, 197
  pulverized, rate model for discharge from a pressurized-aerated tank, 69
Cohesion
  development of, within an insoluble powder by an increase of relative humidity above a critical value as indicated by the measurement of low-frequency electrical impedance, 259
Cohesive coal
  vertical plug flow of, in 2- and 4-inch pipes, 59
Cohesive powders
  behaviour of, in narrow-diameter fluidized beds, 127
Combustion
  of a polydispersed solid using a particle population balance, 281
Compactability
  and compressibility of uranium dioxide powders, influence of admixing of lubricants on, 135
Compaction process agglomeration kinetics
  and micromeritic properties of agglomerate accompanied by, 157
Compressibility
  and compactability of uranium dioxide powders, influence of admixing of lubricants on, 135
Computer simulation
  of agglomeration by a two-dimensional random addition model — agglomeration kinetics and micromeritic properties of agglomerate accompanied by compaction process, 157
Conversion into powder
  in the thermal decomposition of a complex solid containing ammonium hexafluoro-aluminate and aluminium oxide, 151
Creep compliance behaviour
  of direct compression excipients, 83
Criterion for re-entrainment of particles, 21
Crystallization
  hydrothermal, characterization of barium titanate fine powders formed from, 181

Density
  actual, evaluation of, in the acceleration section of vertical risers, 77
  liquid, effect of, on liquid-phase axial dispersion in fluidized beds, 249
Development of cohesion
  within an insoluble powder by an increase of relative humidity above a critical value as indicated by the measurement of low-frequency electrical impedance, 259
Dispersion
  liquid-phase axial, in fluidized beds, effect of liquid density on, 249

Drag coefficient
for axisymmetric flow around individual spheroidal particles, 193

Early studies of magnetized-fluidized beds, 213
Effect
of highly viscous recirculating flow on particle concentration in a two-roll mill, 119
of liquid density on liquid-phase axial dispersion in fluidized beds, 249
of preliminary magnetization in magnetic separation, experimental investigation of, 241
Evaluation of actual density
in the acceleration section of vertical risers, 77
Excipients
direct compression, creep compliance behaviour of, 83
Experimental investigation
of effect of preliminary magnetization in magnetic separation, 241

Flow
highly viscous recirculating, effect of, on particle concentration in a two-roll mill, 119
Fluidized beds
average circulatory motion of particles in, 107
circulating, transmission characteristics of a gas in a, 89
effect of liquid density on liquid-phase axial dispersion in, 249
gas-, large-particle, segregation of binary solids in, 95
-magnetized, early studies of, 213
mixed particle gas–solid total and gas convective heat transfer from a vertical tube to, 27
narrow-diameter, behaviour of cohesive powders in, 127
solid–liquid, settling velocity, wall effects and bed expansion of solid particles in viscous non-Newtonian solutions in, 39
vortexing, suspension layers in, 171
Fragmentation
primary, of a coal during devolatilization, application of Weibull theory to, 197
Freeboard
of vortexing fluidized beds, suspension layers in, 171

Heat transfer
total and gas-convective, from a vertical tube to a mixed particle gas-solid fluidized bed, 27

Identifying states
in shallow vibrated beds, 267
Influence
of admixing of lubricants on compressibility and compactability of uranium dioxide powders, 135

Light-blockage instruments
single-particle statistics derived from, 143

Magnetic separation
experimental investigation of effect of preliminary magnetization in, 241
Magnetization
preliminary, in magnetic separation, experimental investigation of effect of, 241
Magnetized-fluidized beds
early studies of, 213
Micromeritic properties
and agglomeration kinetics of agglomerate accompanied by compaction process, 157
Miles method
for determination of particle size distribution by automatic image analysis, 165
Mill
two-roll, effect of highly viscous recirculating flow on particle concentration in, 119
Mixtures
coal–water, preparation of; effect of the type of coal and improvement of quality of a suspension by means of particle properties, 223
Model
general cell, of stochastic analysis of attrition, 1
rate, for discharge of pulverized coal from a pressurized-aerated tank, 69
two-dimensional random addition for computer simulation of agglomeration, 157

Particle concentration
in a two-roll mill, effect of highly viscous recirculating flow on, 119
Particle population balance
combustion of a polydispersed solid using, 281
Particle size distribution
Miles method for determination of, by automatic image analysis, 165
Particles
criterion for re-entrainment of, 21
in fluidized beds, average circulatory motion of, 107
individual spheroidal, drag coefficient for axisymmetric flow around, 193
single, statistics of, derived from light-blockage instruments, 143
solid behaviour of, in viscous non-Newtonian solutions; settling velocity, wall effects and bed expansion in solid-liquid fluidized beds, 39
solid, transport of, from a trough in a wind tunnel, 235
Phase equilibria
in horizontal pneumatic transport, 51
Plug flow
vertical, of cohesive coal in 2- and 4-inch pipes, 59
Pneumatic transport
horizontal, phase equilibria in, 51
Powder(s)
cohesive, behaviour in narrow-diameter fluidized beds, 127
fine barium nitrate, formed from hydrothermal crystallization, characterization of, 181
insoluble, development of cohesion within, by an increase of relative humidity above a critical value as indicated by the measurement of low-frequency electrical impedance, 259
uranium dioxide, influence of admixing of lubricants on compressibility and compactability of, 135

Powder formation
in the thermal decomposition of a complex solid containing ammonium hexafluoro-aluminate and aluminium oxide, 151
Preliminary magnetization in magnetic separation
experimental investigation of, 241

Quantitative analysis
of binary solids segregation in large-particle gas-fluidized beds, 95

Rate model
for discharge of pulverized coal from a pressurized-aerated tank, 69

Segregation
of binary solids in large-particle gas-fluidized beds, 95
Settling velocity, wall effects and bed expansion
of solid particles in viscous non-Newtonian solutions in solid–liquid fluidized beds, 39
Single-particle statistics
derived from light-blockage instruments, 143
Solid
polydispersed, combustion of, using a particle population balance, 281
Solid particle transport
from a trough in a wind tunnel, 235
Solutions
viscous non-Newtonian, settling velocity, wall effects and bed expansion in solid–liquid fluidized beds, 39
Statistics of single particles
derived from light-blockage instruments, 143
Stochastic analysis of attrition
general cell model, 1
Suspension layers
in the freeboard of vortexing fluidized beds, 171
Suspensions
coal–water, preparation of; effect of the type of coal and improvement of quality of a suspension by means of particle properties, 223

Tank
pressurized-aerated, rate model for discharge of pulverized coal from, 69
Thermal decomposition
of a complex solid containing ammonium hexafluoro-aluminate and aluminium oxide, powder formation in, 151
Total and gas convective heat transfer
from a vertical tube to a mixed particle gas–solid fluidized bed, 27
Transmission characteristics
of gas in a circulating fluidized bed, 89
Transport of solid particles
from a trough in a wind tunnel, 235

Uranium dioxide powders
influence of admixing of lubricants on compressibility and compactability of, 135

Vertical plug flow
of cohesive coal in 2- and 4-inch pipes, 59
Vertical risers
evaluation of actual density in the acceleration section of, 77

Wall effects, settling velocity and bed expansion
of solid particles in viscous non-Newtonian solutions in solid–liquid fluidized beds, 39
Water
preparation of mixtures with coal; effect of the type of coal and improvement of quality of a suspension by means of particle properties, 223
Weibull theory
application of, to primary fragmentation of a coal during devolatilization, 197
Wind tunnel
transport of solid particles from a trough in a, 235
